## Atmospheric River California

- An atmospheric river has begun to slam California. The storm system is forecast to bring several months' worth of rain to Southern California in the span of just a few days, while a flash flood threat covers the Bay Area and Northern California Thursday.
- According to the FOX Forecast Center, there will be multiple rounds of rain that will impact portions of Southern California. One round will come Friday morning, but the peak will be overnight Friday into Saturday.
- As a result, a flash flood threat level 3 out of 4 now exists for both Friday and Saturday across California.
- On Friday, the heavily impacted areas will be in the mountains around Los Angeles near the recent burn scars, especially in the area of the recent Palisades fire.
- Evacuation warnings have been issued for areas around the Palisades, Franklin, Easton and Canyon fires, amongst other locations.
- Flood Watches are now issued through Saturday for most of Southern California, including Los Angeles and San Diego, affecting over 20 million Americans.
- Saturday will bring the peak of heavy rain in Southern California. Moisture levels will increase, causing more rain to develop throughout the morning and afternoon hours.
- Parts of the California coast, including San Francisco and Los Angeles, could see 3-5 inches of rain through Monday, with localized pockets of 5-8 inches of rain. The San Gabriel and Santa Monica ranges could also see 5-8 inches of rainfall.
- If this storm unfolds as forecast, this would be one of Los Angeles' wettest Novembers in the past 50 years.
