WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 6, 2026

Tropical Activity – Atlantic Disturbance 1

- A tropical depression is likely to form in the southern Gulf this week amid the quietest start to an Atlantic hurricane season since 1966.
- The National Hurricane Center (NHC) has designated a tropical disturbance as Invest 92L and is giving the system high odds of becoming at least a tropical depression over the next two days.
- Currently, a massive cold front is draped over Central Florida and is extending across the Gulf, bringing days of heavy rain to the Sunshine State through the workweek.
- A storm could develop at the tail end of this front sometime on Thursday or Friday, potentially developing a more defined center that forecasters can track.
- However, Wednesday will be a crucial day in determining this system's future as it begins to interact with more hostile El Niño-driven winds as well as dry air.
- "A more defined system in the southern Gulf will be able to defend itself from the hostile conditions," the FOX Forecast Center said.
- Regardless of tropical development, forecasts show another round of heavy rain headed to parts of the Florida and Louisiana coasts by the weekend.
- NOAA's Weather Prediction Center (WPC) has issued a Level 2 out of 4 flash flood risk for parts of the Southeast on Friday and Saturday.
- Formation chance – 48-hour: High (90%); 7-day: High (90%)

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 6, 2026

Tropical Activity – Eastern Pacific Hurricane Rachel (CAT 1)

- Located 585 miles WSW of southern tip of Baja California moving west near 8 mph.
- Maximum sustained winds are 85 mph with higher gusts with gradual weakening is forecasted during the next 48 hours.
- Hurricane-force winds extend outward up to 40 miles from the center and tropical-storm-force winds extend outward up to 150 miles.

Disturbance 1

- Located just south of Southern Mexico.
- Environmental conditions appear favorable for gradual development, and a tropical depression is likely to form during the next day or so.
- Formation chance – 48-hour: High (90%); 7-day: High (90%)

Disturbance 2

- Located S of the coast of Guatemala.
- Conditions appear conducive for gradual development; a tropical depression is expected to form early next week.
- Formation chance – 48-hour: Low (near 0%); 7-day: Low (20%)
