WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 21, 2026

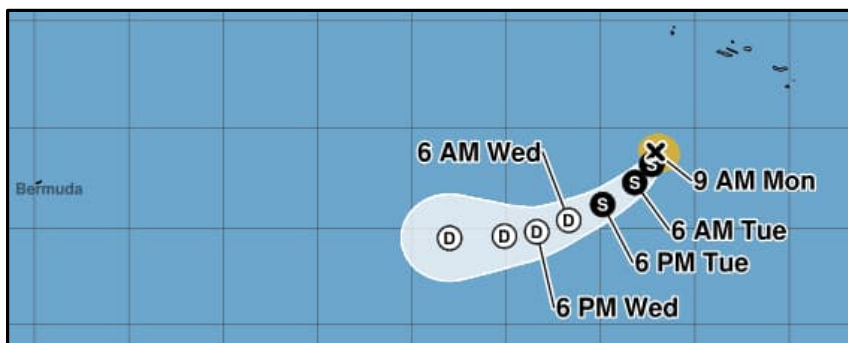

Flash Flood Threat Eastern U.S.

- Parts of the East Coast will be battered by gusty winds and rain through the workweek as the first nor'easter of fall develops.
- The storm is expected to emerge off the coast toward the end of the week and could bring high surf, strong winds, coastal flooding and severe beach erosion through the weekend.
- The system will begin developing on Monday and continue through the weekend bringing rain to the Ohio Valley and parts of the Mid-Atlantic while strong high pressure builds to the north.
- The Outer Banks are forecast to see major coastal flooding, extreme surf and heavy, continuous rain. Some areas could experience wind gusts of 40 to 50 mph, with offshore waves reaching 15 to 18 feet.
- The region will also see widespread rainfall, although widespread flash flooding is not currently forecast.
- By Thursday and Friday, the surface low-pressure system will strengthen off the Southeast and Mid-Atlantic coasts, causing onshore winds to intensify.
- By Saturday and Sunday, the low-pressure center is expected to track north toward the I-95 corridor and New England, solidifying the nor'easter.

Tropical Activity – Atlantic Tropical Storm Fay

- Located about 405 miles SW of the Azores with maximum sustained winds of 65 mph.
- Fay is moving very slowly toward the south-southeast near 2 mph.
- Continued weakening is forecast, and Fay could degenerate to a post-tropical cyclone in a day or two.
- Tropical-storm-force winds extend outward up to 80 miles from the center.

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 21, 2026

Tropical Activity – Pacific

Tropical Storm Odalys

- Located about 1390 miles WSW of the southern tip of Baja California with maximum sustained winds of 45 mph.
- Odalys is moving toward the north-west near 13 mph and this motion is expected to continue through to-night.
- An eastward turn is forecast on Tuesday, followed by a gradual turn toward the east-northeast by midweek, and toward the northeast by the end of the week.
- Tropical-storm-force winds extend outward up to 80 miles from the center.

Tropical Storm Polo

- Located about 240 miles S of Manzanillo Mexico with maximum sustained winds of 50 mph.
- Polo is moving toward the northeast near 5 mph.
- A slow eastward or southeastward motion is expected later today and tonight. However, a sharp turn toward the west-northwest or northwest is expected by late Tuesday.
- Tropical-storm-force winds extend outward up to 60 miles from the center.

Disturbance 1

- Located a several hundred miles to the ESE of the Hawaiian Islands.
- Conditions are forecast to become more conducive for development of this system by the middle to latter portion of this week and a tropical depression is likely to form by that time to the south or SE of the Hawaiian Islands.
- Moving generally westward at 10 to 15 mph.
- Formation chance through 48 hours: Low (20%); 7 days: High (80%)

Disturbance 2

- Located a several hundred miles to the ESE of the Hawaiian Islands.
- Conditions are forecast to become more conducive for development of this system by the middle to latter portion of this week and a tropical depression is likely to form by that time to the south or SE of the Hawaiian Islands.
- Moving generally westward at 10 to 15 mph.
- Formation chance through 48 hours: Low (20%); 7 days: High (80%)
