DAILY DART

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

November 18, 2026

Tropical Activity

Atlantic – Disturbance 1

- The same system responsible for bringing a weeklong flash flood threat to Florida could develop into a coastal storm by the week-end.
- This storm system has the potential to take on some subtropical characteristics but is currently being given low odds of develop-ment over the next seven days.
- Forecasters are monitoring two possible scenarios, with the storm's eventual track and strength playing a major role in determining how significant the impacts could be.
- If the storm develops into a stronger system along this track, it could bring more widespread, heavy rain along the coast, with rainfall extending inland across the Carolinas and Georgia into Saturday evening and Sunday as the storm moves north.
- If the storm remains weaker while following a westerly track, rain and gusty winds would be possible mainly along the coast, with only spotty showers inland. Waves and surf could still be elevated, but overall impacts would likely be minor.
- The second scenario involves a more easterly track, keeping the storm farther offshore.
- If the system develops into a stronger storm along this track, it could bring a quicker burst of gusty winds and rain to coastal areas of the Carolinas and Georgia.
- Regardless of how the storm develops, the Weather Prediction Center has issued a Level 2 out of 4 flash flood risk across South Carolina, Georgia and northeastern Florida from Saturday into early Sunday morning.

Pending Individual Assistance Declaration Requests

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
IN*	Severe Storms, Straight-Line Winds, Torna-does and Flooding Jun 6-26	8/6/26	Pending	9 Counties
