WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 10, 2026

## Severe Weather Outlook Midwestern U.S.

- More than 35 million people across the Midwest are in the bullseye of Wednesday's severe weather threat including the Milwaukee and Chicago metro areas.
- Large hail and tornadoes will be the main hazards Wednesday afternoon across parts of southeastern Minnesota, Wisconsin, northern Illinois, eastern Iowa, northern Missouri and northeastern Kansas.
- NOAA has issued a Level 3 out of 5 risk of severe thunderstorms.
- Heading into the evening, wind gusts up to 75 mph are expected across Wisconsin before pushing into northern Illinois closer to midnight.
- A second elevated round of severe storms capable of producing large hail across eastern Nebraska, southern Iowa, and the Mid-Missouri Valley well into Wednesday night.
- Flash flooding is also likely with repeated rounds of storms and high moisture, with rain rates potentially exceeding more than 2 inches per hour.
- By Thursday, the threat shifts into the Midwest, with a Level 3 severe thunderstorm risk that covers more than 20 million people across the Midwest including the Chicago, St. Louis and Milwaukee metro areas.
- The severe weather threat extends into the Ohio Valley and Northeast.
- Storms will continue to develop in the afternoon and evening with all severe weather hazards possible once again.
- These moisture-rich storms could bring the potential for low-end risk flash flooding, with widespread rainfall totals of 1 to 2 inches possible across Minnesota, Wisconsin, Iowa and Illinois.
- Localized amounts exceeding 2 to 3 inches are possible where storms move more slowly or repeatedly track over the same areas.

WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

June 10, 2026

## Tropical Activity – Atlantic Disturbance 1

- A broad area of low pressure could form over the Bay of Campeche late this week.
- Conditions are not expected to be favorable for significant development.
- The system should move inland over eastern Mexico late this weekend
- Formation chance through 48 hours: Low (0%)
- Formation chance through 7 days: Low (10%)

## Tropical Activity – Pacific Tropical Storm Cristina

- Tropical Storm Cristina sits just off the coast of Central America, drifting westward offshore of El Salvador as it continues to bring inches of rain to the region, elevating the flash flood threat.
- This has prompted a Tropical Storm Warning for Puerto Sandino, Nicaragua to the Guatemala/El Salvador border.
- If Cristina can manage to make landfall as a Tropical Storm, it would only be the third tropical system in El Salvador's history.
- Tropical Storm Cristina has maximum sustained winds of 40 mph and is moving west at 3 mph.
- It is currently about 100 miles south-southeast of San Salvador, El Salvador.
- Expecting to meander along the Central American coast through the week before gradually making a turning northwestward.
- According to the NHC, Cristina is expected to weaken on Thursday after moving inland.
- Cristina could bring heavy rain and life-threatening flash flooding to Nicaragua, Honduras, El Salvador and Guatemala through mid-week.
- Widespread rainfall totals of 4 to 8 inches, with localized amounts up to 12 inches, are expected through midweek.
