WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

July 12, 2024

Severe Weather Outlook

- Along with Beryl's impacts, new tropical moisture along the Atlantic coast will fuel bursts of rain that can lead to flash flooding.
- This downpour zone will crescendo into Friday night before diminishing and exiting slowly on Saturday.
- The initial zone of downpours focused on coastal areas of the Carolinas and southeastern Virginia into Thursday afternoon, with some extending southward to Florida and northward to Delmarva.
- AccuWeather Senior Meteorologist Dave Dombek explained that humidity levels will surge into Friday night, paving the way for prolific downpours in the Carolinas and southern New England.
- Intertwined with the downpours will be a tropical low pressure area that will be forced to the Carolina coast on Friday.
- Then ride northward along the mid-Atlantic coast Friday night and then the southern New England coast on Saturday.
- It is highly unlikely that the low-pressure area will develop into a tropical depression or named tropical storm.
- A general 1-2 inches of rain will fall without the tropical low's influence, but where it becomes involved, local amounts of 6-8 inches can occur in 24 hours or less.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
MN	Flooding Jun 16	42	0	7/9-TBD

Pending Individual Assistance Declaration Request

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
MI*	Severe Storms and Tornadoes May 7	June 6	Pending	4 Counties

*Award of task order to contractor pending
