WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 1, 2026

Potential Flooding Activity Eastern U.S.

- Tropical moisture from the Pacific, Caribbean and Gulf of America will combine to bring repeated rounds of heavy rain across parts of the East beginning Friday.
- As an upper-level trough pulls that moisture farther inland, the setup is expected to fuel days of showers and thunderstorms.
- The pattern could produce a week-long flood threat, with multiple rounds of heavy rain increasing the risk of flash flooding in some areas.
- "The highest rain totals through Monday will be across Louisiana, Mississippi, Alabama and Georgia, where a widespread 2-3 inches is likely," said the FOX Forecast Center. "Totals of 3-5 inches or more are most likely across southern Louisiana and Mississippi."
- This sort of severe weather shift will put millions of Americans in the path of tropical downpours this weekend.
- Stretching from the Gulf Coast to the Ohio Valley and potentially the Northeast, increasing the risk of flash flooding.
- A level 2 out of 4 flash flood risk is in place for Saturday and Sunday across Louisiana, Mississippi and Alabama.

Tropical Activity – Central Pacific

Tropical Storm Nolo

- Located about 380 miles W of Lihue, Hawaii with maximum sustained winds of 60 mph.
- Moving west-northwest at 3 mph.
- Some gradual strengthening is forecast over the next couple of days while Nolo moves westward while remaining south of the Papahānaumokuākea Marine National Monument.

Tropical Depression Nineteen-E

- Located 1,090 miles WSW of the southern tip of Baja California moving east at near 14 mph.
- Maximum sustained winds of 30 mph with higher gusts.
- The depression could become a remnant low later today before dissipating by Friday.

October 1, 2026

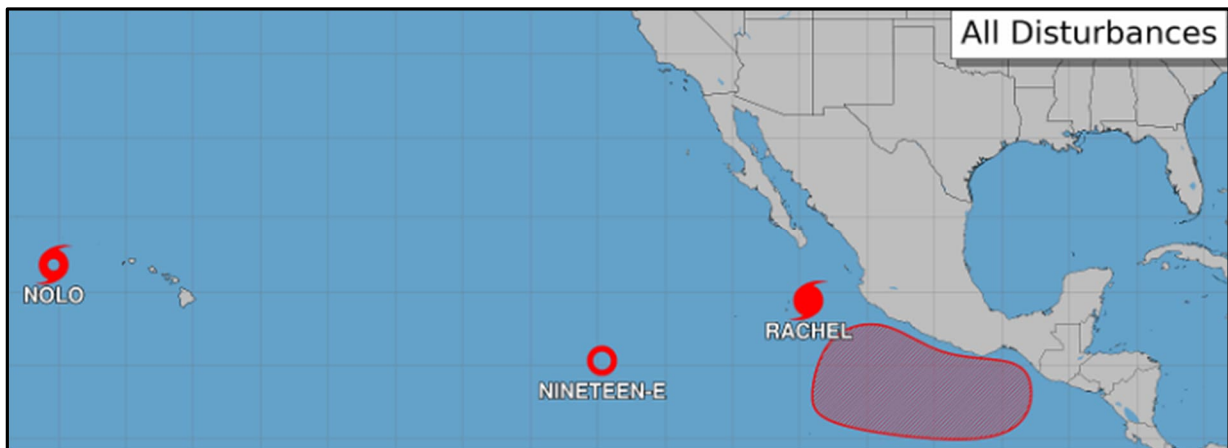

Tropical Activity – Eastern Pacific Hurricane Rachel (CAT 2)

- Located 245 miles SW of Cabo Corrientes, Mexico moving WNW at near 6 mph.
- Maximum sustained winds are near 100 mph.
- Rachel is expected to continue strengthening and become a major hurricane within the next couple of days and begin to turn away from the Mexican coast, heading into the open Pacific as it strengthens.
- Hurricane-force winds extend outward up to 35 miles from the center and tropical-storm-force winds extend outward up to 150 miles.

Disturbance 1

- Located S of southern coast of Mexico.
- Environmental conditions appear favorable for gradual development, and a tropical depression could form while the system moves slowly WNW to northwestward.
- Formation chance – 48-hour: Low (near 0%); 7-day: High (70%)
