Severe Weather Threat

Rockies

- An active weather pattern is setting up across the Rockies and the Plains, bringing a multi-day threat of thunderstorms, large hail, damaging winds and a few possible tornadoes for the week.
- Hot, humid air pushing northward from the Gulf of America is providing plenty of moisture, while fast, energetic winds blowing overhead from west to east across the mountains are creating the spin needed to organize clouds into intense, rotating storms, according to the FOX Forecast Center.
- The week kicked off on Monday with numerous Severe Thunderstorm and Tornado Warnings across Wyoming and Colorado.
- By Tuesday, the greatest threat will be more confined and hone in on eastern Colorado and western Kansas.
- While a few tornadoes are possible, the biggest threat will be damaging winds upwards of 75mph and large hail over 2 inches in diameter, the FOX Forecast Center said.
- As a result, an upgraded Level 3 out of 5 severe storm threat was added.
- On Wednesday and Thursday, the severe threat settles into a highly localized pattern along the higher-elevation prairies of eastern Colorado and southeastern Wyoming.

Tropical Activity – Pacific

Disturbance 1

- Located a few hundred miles SSW off the coast of southwestern Mexico, moving WNW at 10-15 mph.
- Some development is possible.
- Formation chance through 48 hours: Medium (40%)
- Formation chance through 7 days: Medium (40%)

Disturbance 2

- Located several hundred miles offshore of the coast of southwestern Mexico, moving WNW at 10 -15 mph.
- Some development is possible and could become a tropical depression this weekend or early next week.
- Formation chance through 48 hours: Low (near 0%)
- Formation chance through 7 days: Medium (40%)

Tropical Activity – Western Pacific

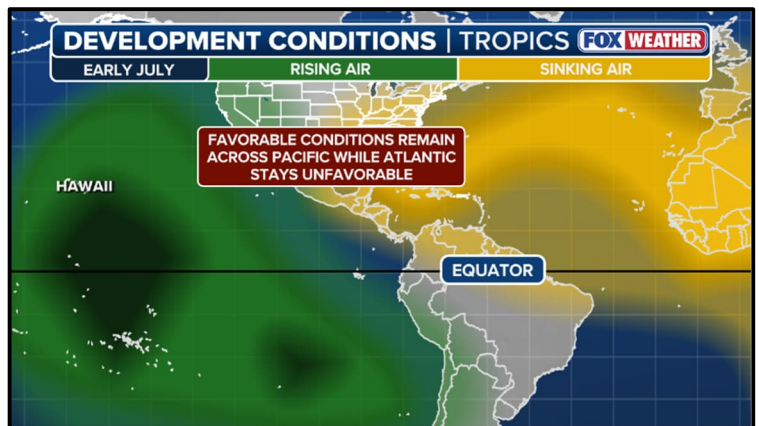

Tropical Storm Higos

- Located 80 miles west of Tinian, 90 miles west of Saipan, and 110 miles north-northwest of Guam, moving W at 9 mph with maximum sustained winds of 40 mph.
- Tropical Storm Warnings remain in effect for Saipan and Tinian.
- The warning remains in effect because the storm's wind field still covers the islands, though winds are expected to weaken as Higos continues west-northwest.

Tracking the Tropics – El Niño intensifies

- El Niño continues to strengthen and is forecast to approach Super El Niño status later in the hurricane season in the Pacific.
- The FOX Forecast Center said typical El Niño impacts are already emerging across both the Pacific and Atlantic basins.
- In the Eastern Pacific, activity has been above average, while the Atlantic has experienced a quieter-than-normal start.
- Warmer-than-average ocean temperatures and atmospheric lift help fuel storm development across the Pacific.
- On the other hand, stronger upper-level winds and increased sinking air across the Atlantic create a more hostile environment that limits tropical development.
- No tropical development is expected across the Atlantic in the next seven days as Saharan dust and hostile winds continue to suppress activity.
- The sprawling African airmass, that is showing little sign of departing anytime soon, is injecting dry, stable air into the region – playing a major factor in the Atlantic hurricane season as summer steps into full stride.
- Into early July, favorable conditions, including rising air and warm ocean temperatures, are expected to persist across the Pacific, supporting continued tropical development.
- Across the Atlantic, hostile winds, particularly over the Main Development Region and Caribbean, are expected to limit activity and contribute to below-average rainfall.
- Seasonal forecasts from both the National Oceanic and Atmospheric Administration (NOAA) and Colorado State University (CSU) continue to reflect El Niño's influence, calling for below-average activity across the Atlantic Basin.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
HI	HI County Earthquake May 23	1	0	6/17 - TBD

Pending Individual Assistance Declaration Requests

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
MS*	Severe Storm & Tornadoes May 6-7	5/19/2026	Pending	5 Counties
GU	Super Typhoon Sinlaku April 11-18	5/18/2026	Pending	Territory-wide
WI*	Severe Storms, Tornadoes, and Flooding April 13-23	5/22/2026	Pending	19 Counties/1 Tribe
MO	Severe Storms, Tornadoes, and Flooding April 23-28	5/22/2026	Pending	6 Counties
MI*	Severe Storms, Tornadoes, and Flooding April 10-21	6/4/2026	Pending	37 Counties

*Award of task order to contractor pending

WSP USA Inspection Services Active Disasters

Disaster Number and State	Disaster Type	Number of Counties Declared	Days Since Launch	Registration Deadline
4899 - MS	Severe Winter Storm	36 Counties	66	6/10/2026
4909 - HI	Severe Storms, Flooding, Landslides/Mud-slides	3 Counties	62	6/14/2026
