WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

August 1, 2024

Tropical Activity

Atlantic - Disturbance #1

- According to the National Hurricane Center (NHC), a well-defined tropical wave is producing a large area of disorganized showers and thunderstorms over Puerto Rico, the Virgin Islands, the northern Leeward Islands and the adjacent waters of the southwestern Atlantic and northeastern Caribbean Sea.
- "Development of this system is unlikely during the next couple of days while it moves west northwestward over portions of the Greater Antilles," NHC said in its latest outlook. "However, environmental conditions are forecast to be more conducive for development after the wave passes the Greater Antilles, and a tropical depression could form this weekend or early next week over the eastern Gulf of Mexico or far southwestern Atlantic Ocean, including in the vicinity of Florida.
- If the disturbance develops, computer forecast models show a variety of outcomes for where it will track and how strong it could become. Any interaction with the mountains on larger Caribbean islands will play a key role in the system's organization, according to the FOX Forecast Center.
- Two large areas of high pressure – one over the southern Plains and the other anchored in the Atlantic near Bermuda – could decide whether the system curls up the Eastern Seaboard, heads for Florida or stays south and tracks into the Gulf of Mexico.
- For now, the consensus is that it will move in the general direction of Florida.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
