WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

May 28, 2026

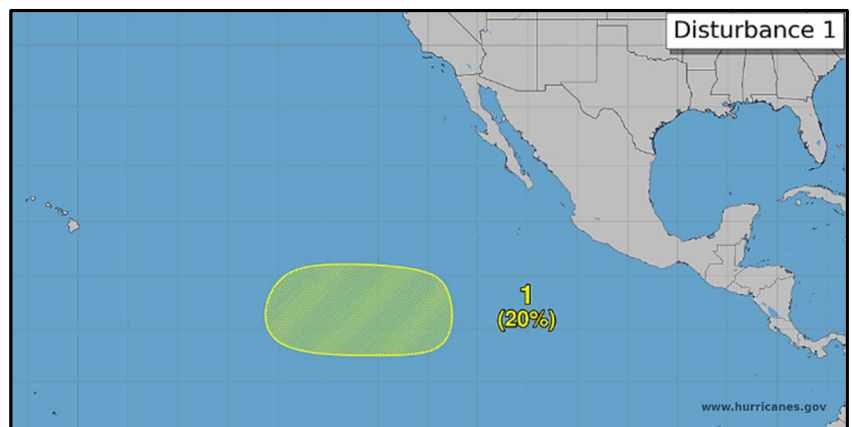

Flash Flood Threat Southeast U.S.

- The weather pattern that triggered water rescues in Texas earlier this week has shifted eastward, with a flash flood threat covering more than 50 million people across a broad swath of the Southeast, including South Florida, through Friday morning.
- Despite the flood threat, this latest round of storms will continue to put a dent in rain deficits across the drought-stricken Southeast, including parts of Georgia and Florida that are still battling historic dry spells.
- A broad Level 1 out of 4 flash flood threat stretches from eastern Kansas southward to parts of the Gulf Coast and eastward to the Atlantic coasts of Georgia and South Carolina.
- Storms are forecasted to develop throughout the day Thursday, tapping into that rich tropical moisture to produce heavy rainfall.
- A Level 1 flash flood threat also covers the Atlantic side of the South Florida peninsula Thursday, including Miami and Fort Lauderdale.
- The FOX Forecast Center expects rainfall totals exceeding 2 to 3 inches along the immediate Carolinas and Georgia coastlines beginning Friday and lasting through the weekend.

Tropical Activity Pacific – Disturbance 1

- A broad area of low pressure is forecasted to form early next week well to the southwest of the southern tip of the Baja California peninsula.
- Some gradual development of this system is possible during the middle part of next week.
- Moving slowly westward or west northwestward across the western part of East Pacific.
- Formation chance through 40 hours – Low (0%)
- Formation chance through 7 days – Low (20%)
