WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 25, 2026

Nor'easter

East Coast

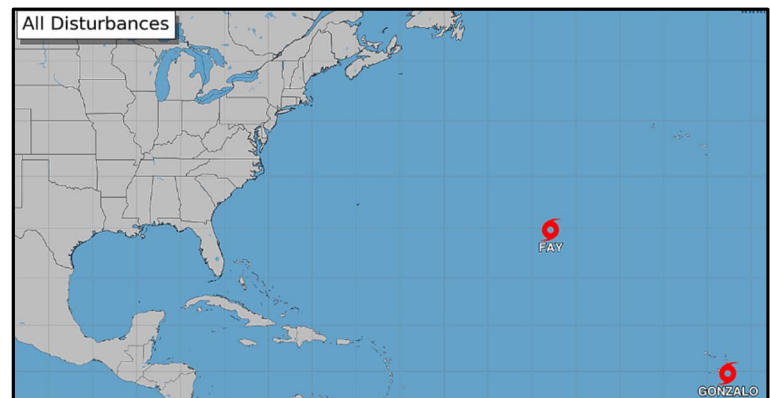

- A strengthening nor'easter is threatening millions as it begins its charge up the East Coast, lashing North Carolina's Outer Banks and the Mid-Atlantic coast with more intense wind, severe beach erosion and high tide flooding.
- Meanwhile, the storm's outer rainbands will begin to soak the New York City metro area and southern New England by mid-afternoon Friday and intensify as the storm's peak impacts arrive across both the Mid-Atlantic and New England Saturday.
- The storm is expected to intensify as it tracks north along the coast through the weekend, bringing prolonged rain, strong winds and coastal flooding through the weekend, with the potential for power outages across impacted areas from North Carolina to Maine, particularly for communities closest to the coast.
- According to the FOX Forecast Center, the worst impacts are expected from Friday night through Sunday across the Boston metro area, the North and South Shores of Massachusetts, Cape Cod, and coastal Rhode Island and Connecticut, where peak wind gusts could reach 50 to 65 mph, rainfall could exceed 5 inches and coastal inundation is possible.
- Major coastal flooding is already ongoing from New Jersey to North Carolina as the storm takes shape, with far-reaching impacts battering beaches and the worst still to come.

Tropical Activity – Atlantic

Tropical Storm Fay

- Located about 1065 miles WSW of the Azores with maximum sustained winds of 50 mph.
- Fay is moving toward the west near 6 mph and a gradual turn to the west-southwest then southwest at a slower forward speed is expected over the next several days.
- Some slight strengthening is possible over the next 12 hours.
- Thereafter, gradual weakening is expected through the weekend.
- Tropical-storm-force winds extend outward up to 80 miles from the center.

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 25, 2026

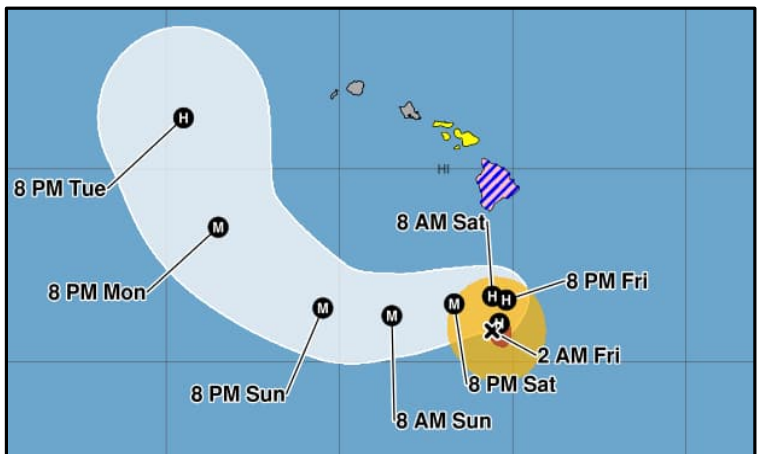

Tropical Storm Gonzalo

- Located about 120 miles east of the southernmost Cabo Verde Islands with maximum sustained winds of 50 mph.
- Gonzalo is moving toward the north-northwest near 10 mph.
- Tropical-storm-force winds extend outward up to 175 miles from the center.

Tropical Activity – Pacific

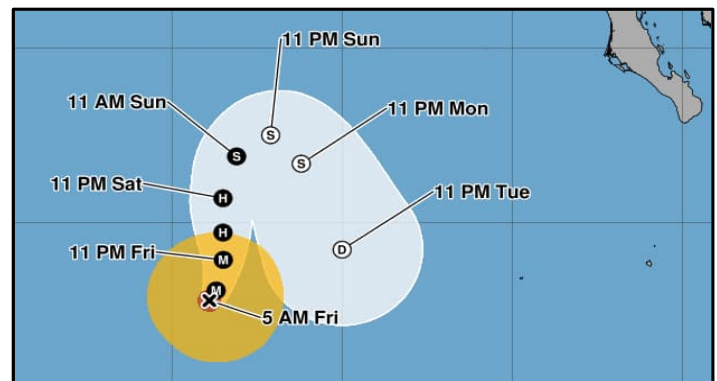

Hurricane Nolo (CAT 1)

- Located about 410 miles SSE of Honolulu Hawaii with maximum sustained winds of 85 mph.
- Nolo is moving toward the north-north-east near 5 mph, and this general motion with a decrease in forward speed is expected through tonight.
- A turn toward the west-northwest and west with an increase in forward speed is forecast Saturday and Sunday. On the forecast track, the center of Nolo will remain well south of the main Hawaiian Islands.
- Hurricane-force winds extend outward up to 40 miles from the center and tropical-storm-force winds extend outward up to 105 miles.
- A hurricane watch is currently in effect for Hawaii Island along with a Tropical Storm Warning.
- A Tropical Storm Watch is currently in effect for Maui Island where storm conditions are possible beginning on Saturday.

Hurricane Odalys (CAT 4)

- Located about 975 miles WSW of the southern tip of Baja California with maximum sustained winds of 130 mph.
- Odalys is moving toward the northeast near 5 mph, with a turn to the north expected to occur over the next couple of days.
- Hurricane-force winds extend outward up to 25 miles from the center and tropical-storm-force winds extend outward up to 150 miles.

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 25, 2026

Hurricane Polo (CAT 5)

- Located 250 miles SSW of Cabo Corrientes Mexico with maximum sustained winds of 160 mph.
- Moving towards the west at near 12 mph, and this motion is expected to continue through today, followed by a gradual turn to the northwest on Saturday and north on Sunday.
- A turn toward the northeast is expected on Monday. On the forecast track, Polo is expected to approach Baja California Sur on Monday.
- Fluctuations in intensity are possible over the next 12 to 24 hours. Weakening should begin by Saturday.

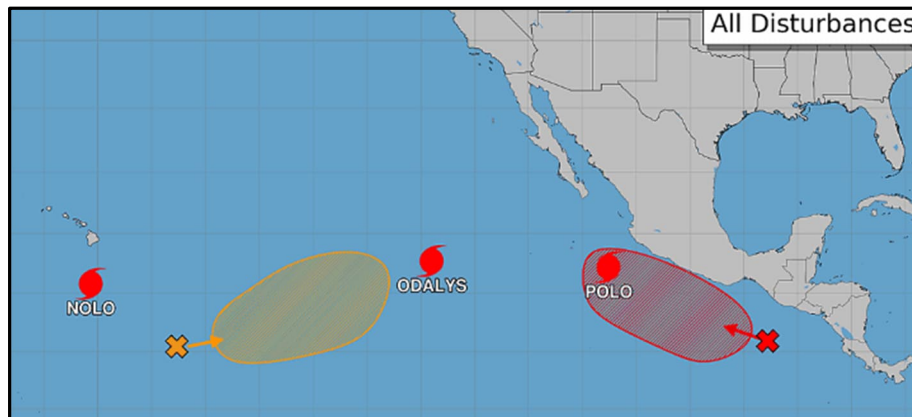

Disturbance 1

- Area of low pressure is expected to form within the next day or two to the south of the Gulf of Tehuantepec.
- Conditions appear favorable for gradual development, and a tropical depression is expected to form late this weekend or early next week.
- Moving slowly WNW to NW, parallel to the coast of southern and SW Mexico.
- Formation chance through 48 hours: Med (40%); 7 days: High (90%)

Disturbance 2

- Area of low pressure could form about 1000 miles ESE of the Hawaiian Islands over the weekend.
- Conditions appear favorable for gradual development of this system, and a tropical depression could form late this weekend or early next week.
- Forecasted to move generally northeastward, remaining well ESE of the Hawaiian Islands.
- Formation chance through 48 hours: Low (20%); 7 days: Med (50%)
