WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 29, 2026

Flash Flood Threat

Central U.S.

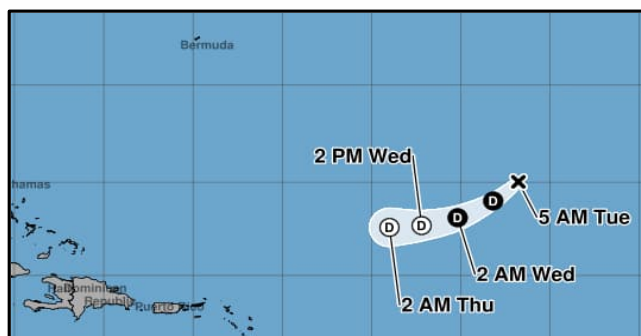

- A dangerous weeklong flash flood threat will spread from the Southwest into the Plains and Midwest, eventually stretching from Texas to Minnesota.
- Putting more than 150 million people at risk as moisture from Hurricane Polo and Tropical Storm Rachel, churning in the Pacific, fuel intense thunderstorms.
- A Flood Watch currently covers 12 states, with more states expected to be added in the coming days.
- Heavy rain will build through the day on Tuesday across much of the Four Corners, the Texas and Oklahoma Panhandles and parts of the Central Plains.
- Remnants of Hurricane Polo, which made landfall in Baja California early Tuesday morning, will rush into New Mexico, bringing wind gusts between 50 and 60 mph in addition to intense rain.
- A Level 3 out of 4 flash flood risk covers over 230,00 square miles across parts of southern and eastern Arizona, much of New Mexico, southern Colorado, the Texas and Oklahoma Panhandles and southwestern Nebraska.
- The flood threat is expected to peak on Wednesday and Thursday as moisture from Tropical Storm Rachel adds more fuel to the ongoing storm pattern.
- The Level 3 flood threat will shift over Oklahoma and Central Texas, where storms could potentially produce up to 3 inches of rain per hour. A separate Level 3 threat zone covers southern Colorado and extreme northern New Mexico.
- Oklahoma and Texas will remain in the center of the flash flood threat which will gradually begin to shift eastward through the end of the week.

Tropical Activity – Atlantic

Tropical Depression Fay

- Located about 1465 miles WSW of the Azores with maximum sustained winds of 40 mph.
- Fay is moving toward the southwest near 13 mph.
- A southwest to west-southwest motion, along with a further increase in forward speed, are expected over the next couple of days.
- Tropical-storm-force winds extend outward up to 35 miles from the center.

September 29, 2026

Tropical Storm Hanna

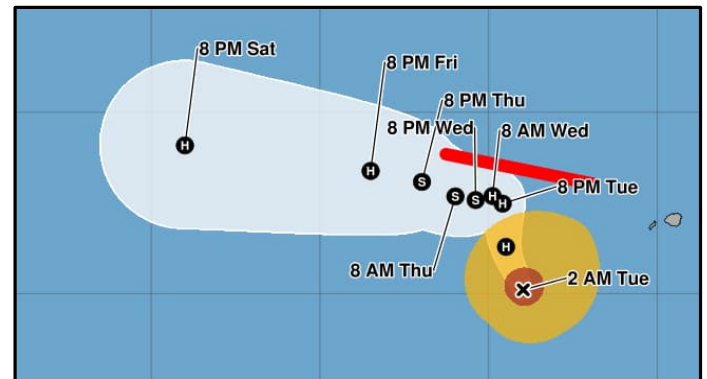

- Located about 1085 miles W of the Azores with maximum sustained winds of 45 mph.
- Hanna is moving toward the east-southeast near 15 mph and this motion is forecast to continue over the next day or two followed by a turn to the east-northeast.
- Hanna is likely to become a post-tropical cyclone by the latter part of this week.
- Tropical-storm-force winds extend outward up to 90 miles from the center.

Tropical Activity – Pacific

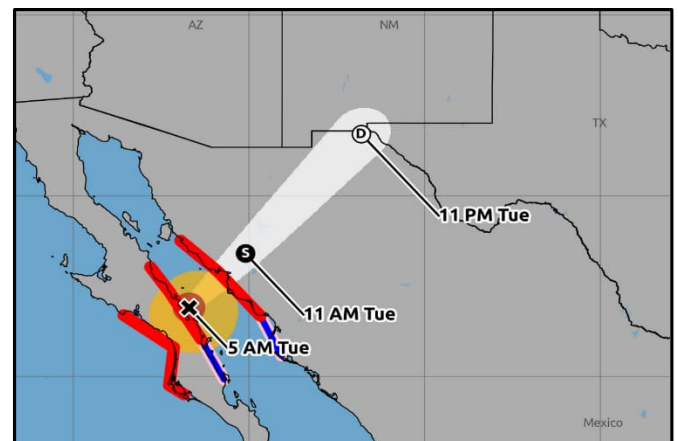

Hurricane Nolo (CAT 3)

- Located about 405 miles W of Honolulu Hawaii with maximum sustained winds of 115 mph.
- Nolo is moving toward the north near 10 mph.
- On the forecast track, the center of Nolo will remain well southwest and west of the main Hawaiian Islands.
- Hurricane-force winds extend outward up to 45 miles from the center and tropical-storm-force winds extend outward up to 175 miles.

Hurricane Polo (CAT 2)

- Located 65 miles NNW of Loreto Mexico with maximum sustained winds of 90 mph.
- Polo is moving toward the northeast near 10 mph and this motion is expected to continue along with a significant acceleration this morning.
- On the forecast track, the core of Polo will cross the Gulf of California for the next several hours, then move inland over southern Sonora late this morning.
- Hurricane-force winds extend outward up to 30 miles from the center and tropical-storm-force winds extend outward up to 90 miles.

September 29, 2026

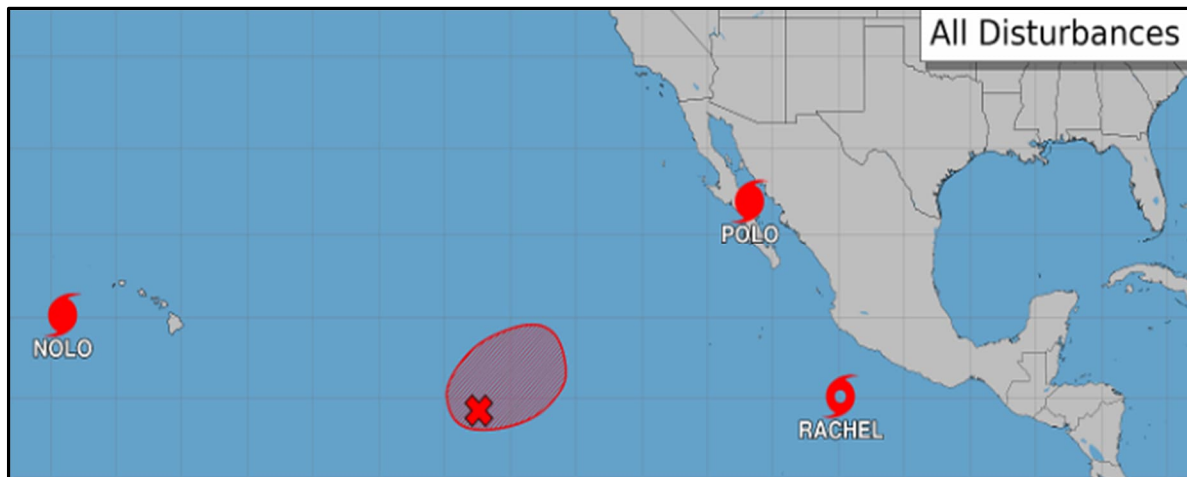

Tropical Storm Rachel

- Located about 265 miles SW of Lazaro Cardenas Mexico with maximum sustained winds of 60 mph.
- Rachel is moving toward the west-north-west near 13 mph.
- A general northwestward motion at a slower forward speed is expected during the next few days.
- On the forecast track, the center of Rachel is predicted to move parallel to, but stay offshore of, the coast of southwestern Mexico.
- Tropical-storm-force winds extend outward up to 160 miles from the center.

Disturbance 1

- Located well east-southeast of the Hawaiian Islands moving slowly east-northeastward.
- Only a slight increase in shower and thunderstorm organization is needed for it to become a tropical depression.
- Formation chance through 48 hours: High (90%); 7 days: High (90%)
