WSP USA INSPECTION SERVICES DISASTER AWARENESS REPORT

November 13, 2025

Atmospheric River California

- A two-part storm system is expected to bring rounds of heavy rain to California later this week and into the weekend.
- The second wave could produce rainfall amounts typically seen over several months in Southern California, resulting in significant travel disruptions, flash flooding and debris flows.
- The heaviest rain is forecast for San Francisco through Thursday, while Sacramento will experience rounds of rain from Thursday-to-Thursday night. Both areas are expected to receive 1-2 inches of rain from the storm.
- Heavier amounts of 2-4 inches are anticipated along the coast of Northern California and along the lower, southwest-facing slopes of the Sierra Nevada.
- Rain from the first part of the storm will affect Los Angeles from late Thursday night to Friday morning and San Diego from Friday morning into midday, before a lull with spotty showers for a time afterwards.
- Strong winds will blast the California coast and the high country of the Coast Ranges, Siskiyou and Sierra Nevada.
- Wind gusts of 40–50 mph are expected in many areas.
- The second leg of the storm will begin Friday night and continue through Saturday and into Saturday night with torrential rain and locally gusty thunderstorms across much of Southern California.
