WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 28, 2026

Nor'easter Northeastern U.S.

- A lingering nor'easter will deliver a final round of rain to most of the Northeast after the monster storm blasted the coast with 60 mph wind gusts over the weekend and bringing significant flooding to some coastal communities.
- Millions from North Carolina's Outer Banks to New England saw intense wind gusts, severe beach erosion and high tide flooding along the coast as the storm meandered just off New Jersey before moving onshore Saturday.
- The nor'easter has weakened significantly but has moved back over open waters between New Jersey and New York's Long Island and will bring swaths of rain across the region and into northern New England through the day.
- More than 150,000 customers were without power over the weekend, particularly concentrated along parts of Long Island and the New Jersey coast, which bore the brunt of the storm.
- The storm tracked much closer to the coast than computer models initially forecast early last week, bringing much more significant impacts, particularly to New Jersey.
- Water rose more than 3 feet above normal high tide in Atlantic City, the most since the 4.16 feet of coastal flooding recorded during Superstorm Sandy in 2012.
- Farther north, low-lying communities like Edgewater also saw significant flooding.
- Flood-prone parts of northern and southern Queens in New York City were also inundated.
- Widespread street flooding was seen across Long Island, including in Lindenhurst and Freeport.
- Babylon was still dealing with several feet of flooding late Sunday, as the ocean overtopped beach dunes, according to local police.
- Winds topped 40 mph across 8 states, with gusts between 60 and 74 mph recorded from Delaware to Massachusetts.
- Parts of southern New England saw the heaviest rain totals from this storm, including eastern Massachusetts, much of which recorded more than 6 inches of rain.

DAILY DART

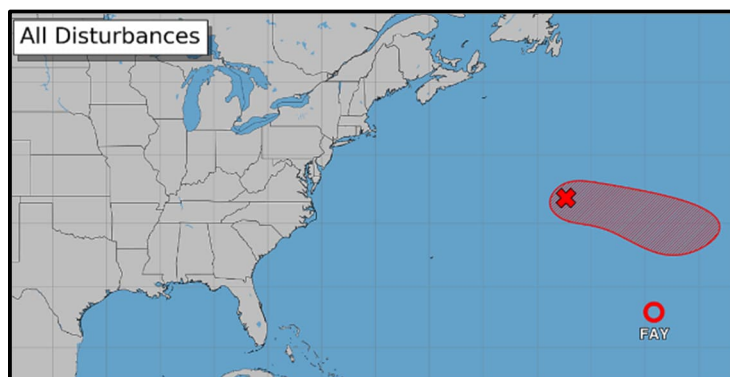

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 28, 2026

Tropical Activity – Atlantic

Tropical Depression Fay

- Located about 1210 miles WSW of the Azores with maximum sustained winds of 35 mph.
- Fay is moving toward the SSW near 7 mph.
- A turn to the southwest and then to the west-southwest, along with an increase in forward motion, is expected over the next 48 hours.
- Little change in strength is forecast during the next 48 hours.

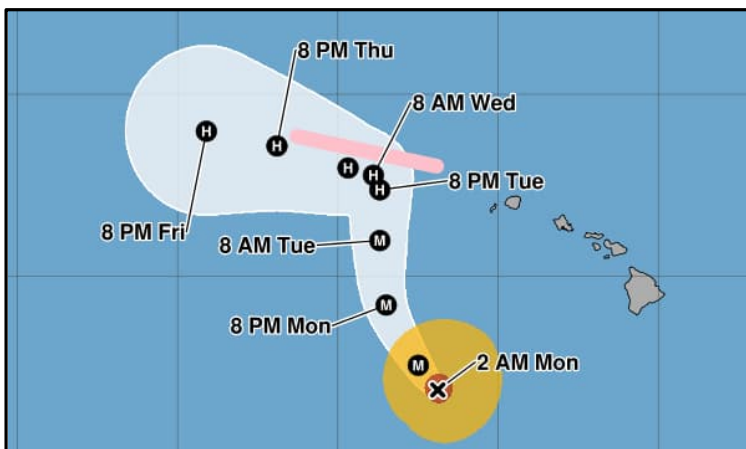

Disturbance 1

- Located well to the east-northeast of Bermuda and is moving quickly eastward.
- Conditions are currently only marginally favorable, this system is now likely to become a tropical depression or storm over the next day or two as it turns east-southeastward and slows down over the central Subtropical Atlantic.
- Conditions are expected to become unfavorable for further development later this week.
- Formation chance through 48 hours: High (70%); 7 days: High (80%)

Tropical Activity – Pacific

Hurricane Nolo (CAT 4)

- Located about 405 miles SW of Honolulu Hawaii with maximum sustained winds of 155 mph.
- Nolo is moving toward the west-north-west near 12 mph.
- A turn toward the northwest is forecast later today, with a turn toward the north expected on Tuesday.
- On the forecast track, the center of Nolo will remain well south and southwest of the main Hawaiian Islands but will approach the Papahānaumokuākea Marine National Monument on Tuesday.
- Some additional strengthening is expected, and Nolo could become a category 5 hurricane later today. A gradual weakening trend is likely to begin tonight.
- Hurricane-force winds extend outward up to 35 miles from the center and tropical-storm-force winds extend outward up to 150 miles.

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 28, 2026

Hurricane Polo (CAT 3)

- Located 110 miles SSW of Cabo San Lazaro Mexico with maximum sustained winds of 115 mph.
- Polo is moving toward the north-northeast near 10 mph.
- A turn toward the northeast is expected this afternoon, followed by a slight increase in forward speed. Polo is forecast to be near major hurricane strength when it reaches Baja California Sur later today and is anticipated to be a hurricane when it makes landfall in mainland Mexico late tonight or early Tuesday morning.

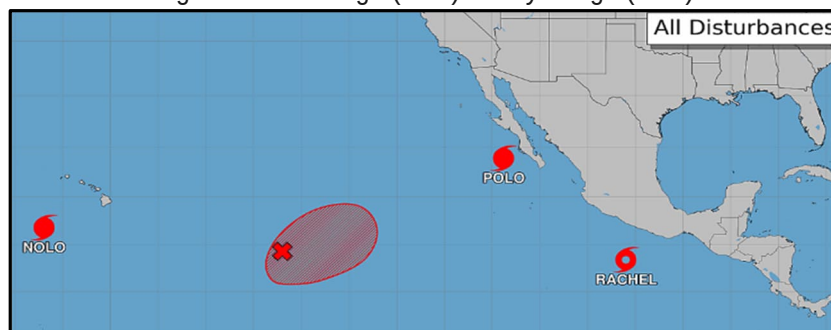

Tropical Storm Rachel

- Located about 250 miles SSW of Acapulco Mexico with maximum sustained winds of 45 mph.
- Rachel is moving toward the west-northwest near 8 mph.
- An increase in forward speed is expected by mid-week while the cyclone continues on a west-northwestward heading.
- Gradual strengthening is expected during the next few days, and Rachel is forecast to become a hurricane by mid-week.
- Tropical-storm-force winds extend outward up to 140 miles from the center.

Disturbance 1

- Located well east-southeast of the Hawaiian Islands.
- Conditions are conducive for further development, and a tropical depression is expected to form alter today or tomorrow as the system moves generally northeastward and remaining well east of the Hawaiian Islands.
- Formation chance through 48 hours: High (90%); 7 days: High (90%)
