WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 17, 2026

Tropical Development Potential – Atlantic

- AccuWeather meteorologists are monitoring two areas for possible development through late September, including one near the United States Gulf Coast.
- These tropical threats are emerging amid a weather pattern dominated by El Niño, which has largely suppressed tropical activity across the Atlantic throughout most of the hurricane season.
- The area with the greatest risk, which currently has a medium chance of development, is a zone several hundred miles southeast of Bermuda. The window for development is Sept. 19-22.
- AccuWeather meteorologists are also watching the northern Gulf, a familiar area for tropical development this season.
- Tropical systems that develop close to the United States are sometimes referred to as "homegrown" or "homebrew" storms.
- A dip in the jet stream along the Atlantic coast may allow a storm in the upper atmosphere to break away and drift southwestward across Florida late this week.
- "Wind shear and the storm's swift movement will initially prevent it from extending to the surface and developing into a tropical system," AccuWeather Lead Hurricane Expert Alex DaSilva said. "However, if it slows down over the northern Gulf, a tropical depression or storm could develop near the Gulf Coast from late this week into this weekend."
- If no Atlantic hurricane forms through Sept. 21, the 2026 season will set a record for the latest arrival of the season's first hurricane.
- If no hurricanes form during the entire 2026 Atlantic season, it would become the first hurricane-free season of the satellite era, which began in the mid-1960s.
- Only two Atlantic seasons are officially documented as having produced no hurricanes: 1907 and 1914.

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

September 17, 2026

Tropical Activity – Atlantic

Disturbance 1

- Located 350 miles E of Bermuda.
- Environmental conditions could support gradual development of this system during the next day or two, and a tropical depression could form during that time.
- The system is forecast to move slowly today, and then possibly turn southward on Friday over the subtropical Atlantic.
- Formation chance through 48 hours: Medium (40%); 7 days: Medium (40%)

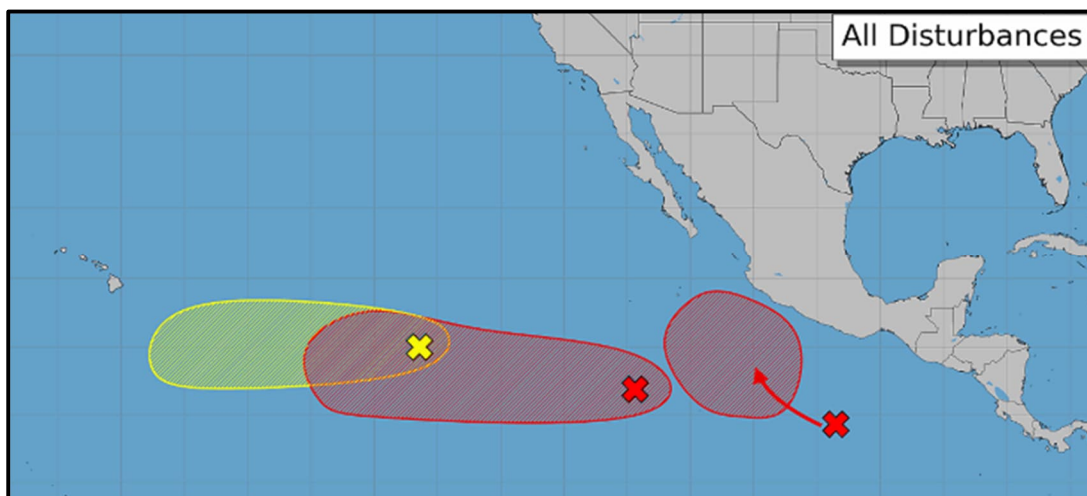

Tropical Activity – Pacific

Disturbance 1

- Located several hundred miles S of southwestern Mexico.
- Environmental conditions appear conducive for gradual development, and a tropical depression is likely to form this weekend or early next week.
- Formation chance – 48-hour: Low (0%); 7-day: High (70%)

Disturbance 2

- Located well SW of the Baja California peninsula.
- Environmental conditions appear conducive for gradual development and could become a tropical depression this weekend.
- Formation chance – 48-hour: Low (10%); 7-day: Medium (60%)
